

## WEDGE ANCHOR KIT - 3/8" X 3"

The Kendall Howard Wedge Anchor Kit – 3/8" x 3" works with both wall mount and floor mount products that are being installed into a concrete surface. Four anchors are included with this kit to make mounting products, such as our 4-Post Adjustable Rack to the floor, a breeze. To install, use a 3/8" drill bit to create a hole (at least 1 1/2" deep) in a concrete surface. Next, use a hammer to install the wedge anchor; and finally tighten the nut with a wrench. In just a few easy steps, your products will be securely mounted to any concrete surface with the Wedge Anchor Kit.

- Includes four anchors
- Suitable for mounting into concrete surfaces
- Pre-assembled, ready for use
- Requires a 3/8" drill bit for drilling into the wall or floor

### FEATURES

**Compatible with Concrete Surfaces** - Whether you're mounting a product to the floor or to the wall, the Wedge Anchor Kit is a great tool to use when working with concrete surfaces.

**Pre-Assembled Anchors** - The Wedge Anchor Kit comes with four, pre-assembled anchors ready for use in any concrete wall or floor surface.
